=====

This is how I make my soy wax melts.

Each melt is 20-22 grams.

Melted to 150 F degree ( 66 C Degree )

The mold is a Mini Muffin tray.

Holds 240 grams of wax ( Including fragrance & Dye )

Each of my fragrances have a different color and I have a database of every fragrance I use.

My wax is Soy Pillar Blend. This wax is generally used for making pillar candles, votives and soy melts.

Any questions, please post them below.
